## Using this manual

The following notations and symbols are used throughout this manual.

## Notations and Symbols

Caution mark ..... Items which follow  are items that you must pay particular attention to when handling Link Theater. Failure to follow this mark may result in personal injury and/or damage to the device.

Next operation mark ..... Page numbers that come after  indicate the page you should proceed to next.

## Terminology notation within the manual

- This manual assumes that your computer has the following drive configuration:  
C: Hard disk  
E: CD-ROM drive
- Names enclosed in [ ] brackets within the manual represent dialog box names, menus, buttons, check boxes or other such items that you need to select when operating the device.
- Names enclosed in < > brackets represent keys on the keyboard. (Example) <Enter>

# Using LinkTheater

Thank you for choosing LinkTheater! This manual should help you configure and use your new LinkTheater.

## Supported file formats

The following file formats can be played back using LinkTheater.

Media Server trans code compatible format (*1)	AVI (*2), WMV, WMA, GIF
Compatible formats	<ul style="list-style-type: none"><li>• Audio files encoded in either MP3 or WAV (uncompressed)</li><li>• Image files saved/compressed in JPEG, BMP or PNG formats</li><li>• Video files encoded in MPEG-2 format</li></ul>
Compatible video formats	Image section digital compression format <ul style="list-style-type: none"><li>• MPEG-2 standard resolution (*.MPG file, m2p file)</li><li>• Maximum resolution 720 x 480 Maximum 8Mbps (*3)</li><li>• Maximum frame rate 30fps</li></ul>
	Audio section digital compressed <ul style="list-style-type: none"><li>• MPEG-1 Audio Layer 2 2 channel</li><li>• MPEG-1 Audio Layer 3 2 channel</li></ul>
	Audio section digital uncompressed <ul style="list-style-type: none"><li>• Linear PCM 2 channel (S/P DIF) 16 bit, 48kHz</li></ul>
Compatible audio formats	<ul style="list-style-type: none"><li>• Linear PCM (*.WAV)</li><li>• MPEG-1 Audio Layer -3 (*.MP3)</li></ul>
Compatible image formats	<ul style="list-style-type: none"><li>• JPEG (*4), BMP, PNG</li></ul>

\*1: LinkTheater plays MPEG-2 and MP3 files. Other formats are transformed into MPEG-2 and MP3 for playback.

For format transformation, your PC should meet the following requirements.

■ Minimum system requirements

[CPU] Pentium4 1.4GHz or higher, or equivalent performance CPU

[Memory] 256 MB or higher

■ Recommended system requirements

[CPU] Pentium4 1.8GHz or higher/ Celeron 1.8GHz or higher/ Pentium M 900MHz or higher

Celeron M 1.0GHz or higher, or equivalent performance CPU recommended.

[Memory] 512 MB or higher recommended.

\* Low bit rates may allow some files to play from PCs that do not meet the above requirements.

\* Not all files can be played.

\*2: The AVI codec must be installed in your computer to convert and play AVI files.

\*3: If LinkTheater is connected to an 11Mbps wireless LAN, or if playback is performed from an USB1.1 device, demanding video files (3Mbps or more) may skip or drop frames.

\*4: Only baseline JPEGs can be viewed.

# Registering a folder for playback

In order to play computer files on LinkTheater, you need to register the folders on the computer. Refer to the separate [Read Me First] document, and register your media folders for playback.

## Data playback on a television

Refer to the separate [Read Me First] document for details on the procedure for playing back computer or server data on a television.

 **Note** LinkTheater can play MPEG-2 and MP3 files. Other formats are automatically transformed for playback. You can change the image quality by right-clicking on the Transcoder's task tray icon and selecting *Quality* from the displayed menu, or as shown below.

## Converting data

When videos cannot be played smoothly because of dropped frames, or if you want to play back MPEG-2 files that have a bitrate higher than 8Mbps, you need to convert the files on your computer before playback, as shown below.

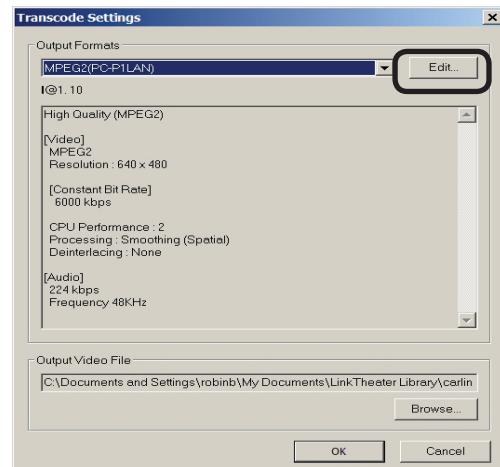

**1 Click [Start]-[(All) Programs]-[BUFFALO]-[PC-P1LAN]-[Transcoder]-[Transcoder].**

**2 Drag and drop the file that you want to convert.**

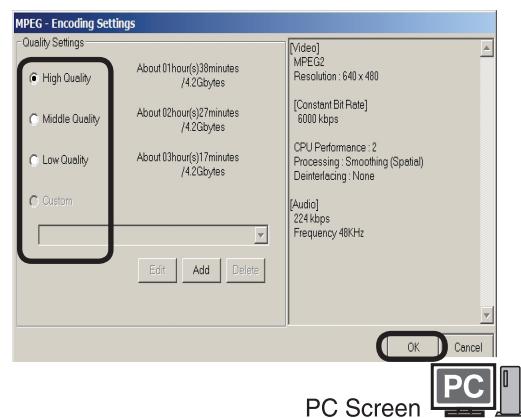

- \* In order for you to distinguish between explanations concerning the television screen and computer screen and explanations about the computer screen are marked with this icon .
- \* Screens shown in this manual are examples. Your display may be slightly different.

**3 Click [Edit Settings].**

**4 Select the compression quality, then click [OK].**

If you wish to configure image quality settings individually, click [Add] in step 4 on page 4, and set the details as desired. Individual items can be selected under [New Profile].

The following items can be set.

### Mode

Mode can be selected from constant bitrate (CBR), variable bitrate (CVBR), and constant quality (CQ). The features of each mode are explained in the [Glossary] on page 21. Items that can be set in [Rate settings] differ depending on the mode selected here.

### Bitrate

The larger the set value, the clearer the image will be. However, the size of the recorded file also increases. The possible setting range is 192~8000 (kbps).

If [Variable Bitrate] is selected in adjustment mode, recording is performed within the range of bitrates set for maximum bitrate and minimum bitrate. Set this value so that it falls between the [Maximum Bitrate] and [Minimum Bitrate] which will be set below.

### Maximum Bitrate

This setting is the maximum bitrate used when recording. This can only be set when [Variable Bitrate] is selected in adjustment mode. It is possible to set a value in the range of the [Bitrate] value in the item above ~8000 (kbps).

### Minimum Bitrate

This setting is the minimum bitrate used when recording. This can only be set when [Variable bitrate] is selected in adjustment mode. It is possible to set a value in the range of the [Bitrate] value in the item above ~192 (kbps).

### DeInterlacing

“Bob” interlacing produces the sharpest image but may leave noise artifacts. “Median” interlacing reduces noise but may remove image detail.

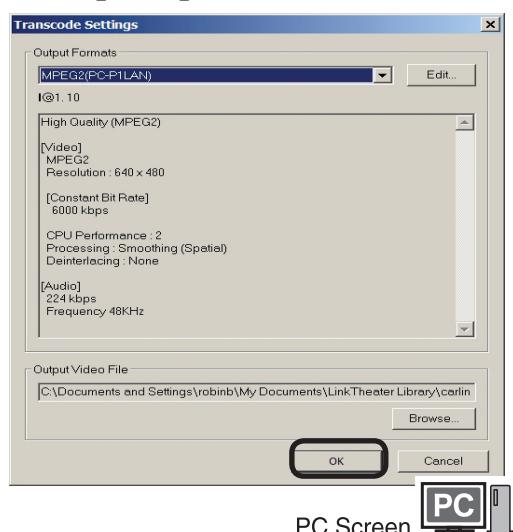

### CPU processing speed

Image quality improves with a larger value, but the strain placed on the CPU (computer) also increases. Use higher numbers if you have a fast computer. Normally, a value in the range of 0~2 is used.

### Audio bitrate

A high bitrate provides higher sound quality, but it also increases the size of the file.

## 5 Click [Add].

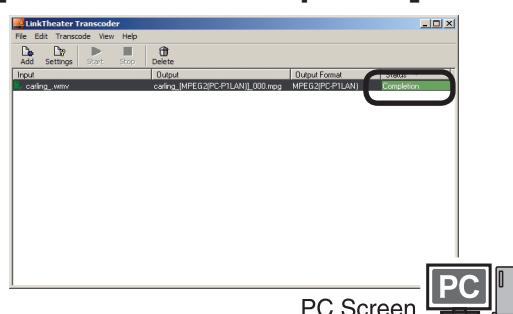

PC Screen

You can specify the save destination and name of the file after conversion by clicking [Output file]-[Browse]. By default, the converted file is added and saved to the same location as the conversion source file, and [MPEG2 (PC-P1LAN)]\_000 is added to the end of the file name (the 000 number counts up when the same name file is converted a number of times).

## 6 [Status] displays [Awaiting conversion] → [Converting] → [Conversion completed].

PC Screen

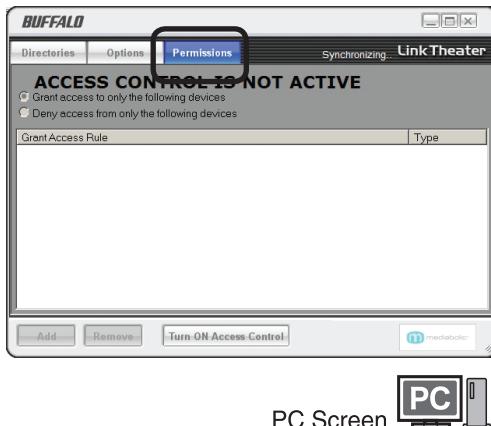

To stop the conversion process, click [Stop]. Click [Start] to restart a stopped file.

# Configuring access restrictions

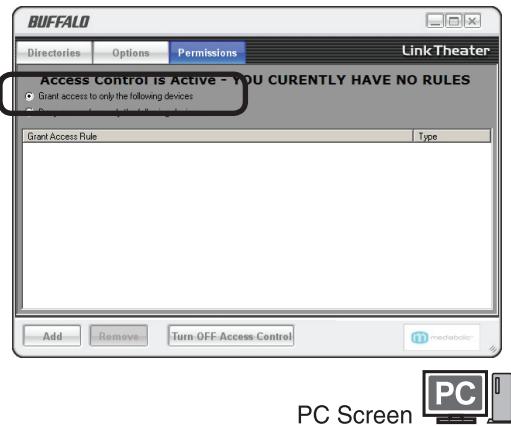

You can set access restrictions to shared playback folders, so that the folder can only be played back when specific conditions are met. These settings can be performed as follows.

- 1 Click [Start]-[(All) Programs]-[BUFFALO]-[PC-P1LAN]-[Configure Media server].**
- 2 Click the [Permissions] tab.**

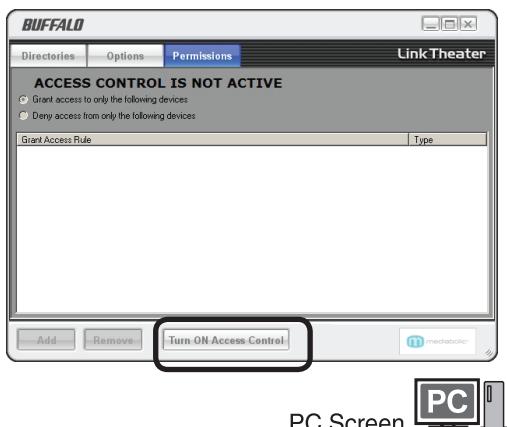

- 4 Click [Only accept access from the following client devices].**

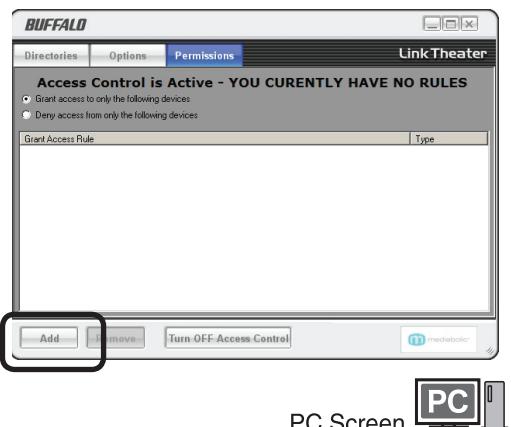

When you want to prohibit specific conditions, select [Prohibit access from the following client devices].

- 3 Click [Turn ON Access Control].**

- 5 Click [Add].**

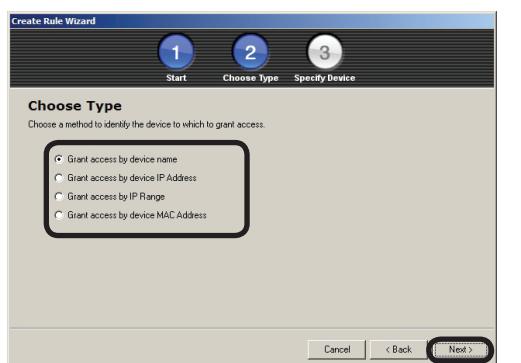

## 6 Click [Next].

## 7 Select the conditions for access restriction, then click [Next].

You can select restriction conditions of host name, IP address, network address, and MAC address (get MAC address from the back of your LinkTheater).

Step through the wizard to complete the access restriction settings.

# Playing back DLNA compatible media server data

## About DLNA (Digital Living Network Alliance)

DLNA (Digital Living Network Alliance) has defined product design guidelines [Home Network Device Interoperability Guidelines] with the aim of standardizing electronic industry technology and realizing an interconnected environment of digital equipment (computers, household appliances, mobile devices).

LinkTheater can play media files from DLNA compatible media servers such as the Buffalo LinkStation HS-DGL Home Server series. Select "HOME Server" (the DLNA compatible media server) from the LinkTheater Home screen, and press the [Select/Play] button on the remote control.

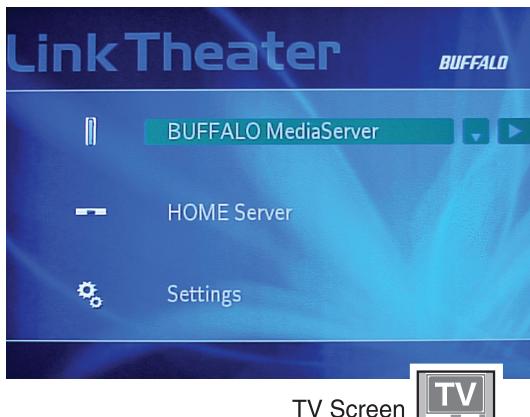

Your DLNA media server may not have DLNA functionality turned on by default. For LinkTheater to stream media from a DLNA server, DLNA must be turned on! This is not always the default setting. Refer to your DLNA media server's manual for more information on enabling DLNA media server functionality.

# Advanced Settings

Normally, you won't need to change these settings. Here's explanations of each in case you do.

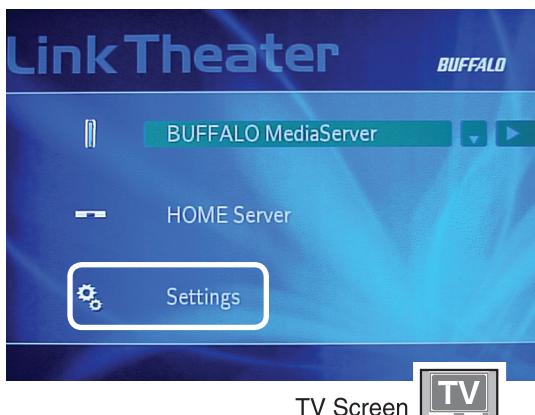

## LinkTheater Advanced Settings

- 1 Press the power button and start LinkTheater.

- \* In order for you to distinguish between explanations concerning the television screen or computer screen, explanations about the television screen are marked with this icon .
- \* Screens shown in this manual are examples. Your display may look slightly different.

- 2 Select [Settings], and press ► button.

- 3 You can configure each of these items.

- **(Wired) Network settings**

The following settings can be performed in [Edit Profile].

Obtain automatically (DHCP): If there is a DHCP server on the network, an IP address is assigned automatically.

Manual settings: You can also manually enter the IP address and subnet mask.

The settings are enabled by selecting the items edited above in [Profile selection], and pressing the [Select/Play] button on the remote control.

- **Display settings**

In [Screensaver], you can set the amount of time (1~60 minutes) before the screensaver starts on the television screen when there are no operations performed.

You can set the amount of time (3 seconds — 2 minutes) that a photograph is displayed on the television screen in [Photo display interval].

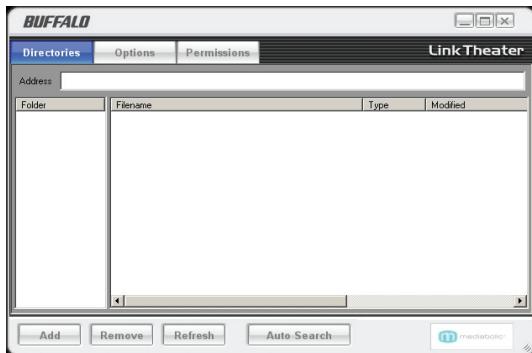

- **(Firmware) Version**

This displays the firmware version number.

# Media Server Configuration

You can register folders that will be played on LinkTheater and also set access restrictions. Click [Start]-[All] Programs-[BUFFALO]-[PC-P1LAN]-[Configure Media server] to display the settings screen.

**Shared folder screen**

PC Screen 

- **Add**

Registers folders that contains files that you want to play on the LinkTheater.

- **Delete**

By selecting a folder and clicking [Delete], registration of the shared folder is deleted.

- **Update**

This updates the shared folder and file display.

- **Automatic search**

This starts the automatic search wizard. You can find folders on the computer that contain video, audio, and image files by using the automatic search wizard.

**Settings screen**

PC Screen 

- **Enable file sharing on computer startup**

This setting enables file sharing when the computer starts up.

- **Display icon in task tray when program is closed**

This setting displays an icon in the task tray when [Media server settings] is closed.

- **Default settings**

Restores Media server settings to the initial settings.

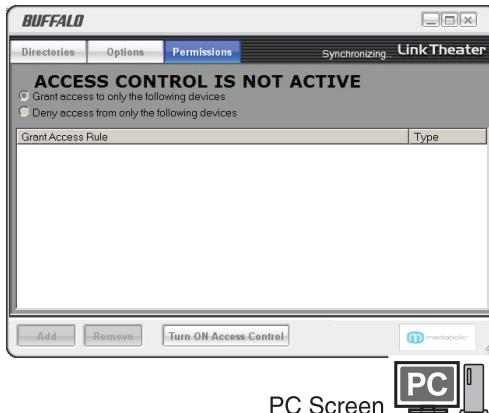

- **Do not share files**

This setting disables file sharing.

- **Share files**

This setting enables file sharing.

## Access restrictions screen

- **Enable access restrictions**

This setting enables access restrictions. This is not displayed if the settings are already enabled.

- **Disable access restrictions**

This setting disables access restrictions. This is not displayed if the settings are already disabled.

- **Only allow access from the following client devices**

This setting only allows access from devices listed in [Restriction rules].

This cannot be selected when access restrictions are disabled.

- **Prohibit access from the following client devices**

This setting prohibits access from the devices listed in [Restriction rules].

This cannot be selected when access restrictions are disabled.

- **Add**

This starts the Add access restrictions wizard.

You can set allow/prohibit conditions (host name, IP address, network address, MAC address) using this wizard.

This cannot be selected when access restrictions are disabled.

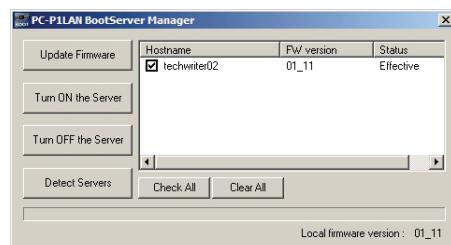

- **Delete**

You can delete conditions by selecting them in [Restriction rules] and clicking [Delete].

## BootServer Manager

You can set firmware rewrite (FW) and enable/disable server functions using the BootServer administration tool. Click [Start]-[All Programs]-[BUFFALO]-[PC-P1LAN]-[BootServer Manager] to start the tool.

### BootServer Management screen

PC Screen

- **Detect servers**

This detects BootServer media servers on the network.

- **Check all**

This displays a check mark in the check boxes for all detected servers.

- **Clear All**

Removes all of the check mark displays.

- **Update Firmware**

This updates checked server firmware.  
[FW version after rewrite] displays the version number after rewrite.

- **Turn ON Server**

Enables servers that have a check mark displayed.

- **Turn OFF Server**

Disables servers that have a check mark displayed.

\* Do not disable all servers on the network, or the PC-P1LAN startup screen will not be displayed. You need at least one BootServer media server to use the LinkTheater.

An icon is displayed in the task tray when your computer is running the BootServer media server. If no icon is displayed, the PC-P1LAN startup screen will not be displayed.

Click [Start]-[All Programs]-[BUFFALO]-[PC-P1LAN]-[PC-P1LAN BootServer] to launch the BootServer media server on your PC.

# Appendix

This section gives procedures for manually setting IP addresses, describes firmware update procedures and the procedure for playing back LinkStation data, addresses basic troubleshooting, and gives device specifications.

## For customers that do not have a router (Procedure for manually configuring the IP address)

If you have no router on your network and connect your LinkTheater directly to your PC, you'll need to set the IP address manually. To do this, you'll need to determine the IP address and subnet mask for your computer. Only configure the LinkTheater's IP address manually if you have a good reason for doing so, e.g. you are not using a router, or your network has no DHCP server.

 **Note** The numbers and letters that are displayed on the screen will differ according to your environment.

### Checking the computer's IP address

#### 1 Click the menu below and start the command prompt.

Select [Start] - [(All) Programs] - [Accessories] - [Command prompt].

#### 2 [C:\>] is displayed on the screen. Type [IPCONFIG/ALL], and press the <ENTER> key.

#### 3 The IP address is displayed in the [IP Address] column, and the subnet mask is displayed in the [Subnet Mask] column.

C:\>IPCONFIG/ALL	
Ethernet adapter local area connections	
IP address	: 192.168.11.2
Subnet Mask	: 255.255.255.0
Connection-specific DNS Suffix :	
Description	: BUFFALO LGY-PCI-TXD Ethernet Adapter
Physical Address	:
DHCP Enabled	: Yes
Default Gateway	: 192.168.0.1
DNS Servers	: 192.168.0.1

**Check**

Now you know your computer's IP address. See page 13 for more on LinkTheater's IP address and Subnet mask. Continue to page 14 to set LinkTheater's IP address and subnet mask.

## What is the LinkTheater IP address value?

Set the following values for the LinkTheater IP address.

Computer IP address

When the IP address is 192.168.11.2

LinkTheater IP address

Set to 192.168.11.12.

**Set the same value**

**Set a different number from the computer between 2 and 254**

## What is the LinkTheater Subnet mask value?

Set the LinkTheater subnet mask value to the same value as the computer's subnet mask value.

Computer's subnet mask

When the value is 255.255.255.0

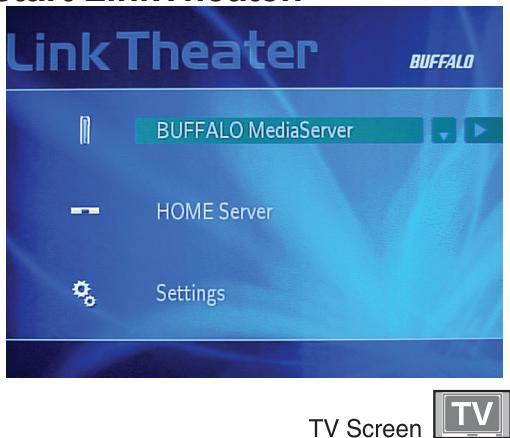

LinkTheater subnet mask

Set this to 255.255.255.0.

**Set the same value**

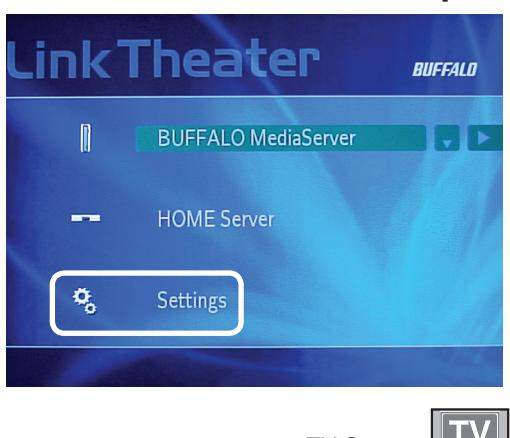

## Configuring the LinkTheater's IP address

- 1 Press the power button and start LinkTheater.**

TV Screen

- 2 Select [Settings], and press ► button on the directional pad.**

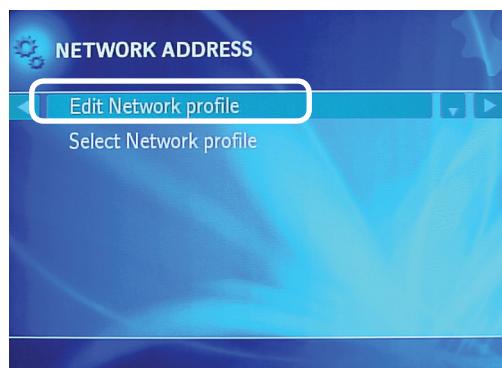

TV Screen

- 3 Select [Network], and press ► button.**

TV Screen

- 4 Select [Edit Network Profile] , and press ► button.**

TV Screen

- 5 Select [Static], and press ► button.**

TV Screen

- 6 Enter the IP address and subnet mask, and press the [Select/Play] button.**

TV Screen

 **Caution** Make sure the LinkTheater's IP address is not the same as the computer's IP address. If you are not sure of the value to set, see page 12.

Example: If the computer's IP address is [192.168.11.2] and the subnet mask is [255.255.255.0], then set the LinkTheater's IP address to [192.168.11.12] and the subnet mask to [255.255.255.0].

 **Note** The IP address and subnet mask can be entered using the ten key buttons on the remote control. You can enter a "." (decimal point) by pressing the [1] button twice in succession.

## 7 By pressing **◀** button twice, you can return to the screen in procedure 4.

## 8 Select [Select Network profile], and press **▶** button.

TV Screen 

## 9 Select [Static], and press **▶** button.

TV Screen 

Your LinkTheater is now configured with a static IP address.

# Troubleshooting

## I cannot switch the power on

### Cause:

The power cord is disconnected from the wall socket or LinkTheater

### Solution:

Connect the power cord to the wall socket or LinkTheater

## I cannot see videos or hear sounds

### Cause (1):

The connection to the television is incorrect

### Solution (1):

Connect the television correctly

### Cause (2):

The correct video input has not been selected on the TV

### Solution (2):

Select from inputs that are connected to LinkTheater, for example “video”, etc.

### Cause (3):

The LinkTheater or television mute function is enabled

### Solution (2):

Press the [Mute] button on the remote control to disable the mute function. Refer to the manual that came with your television for details on how to disable the television’s mute function.

### Cause (4):

DirectX has a problem, or has been deleted

### Solution (4):

Insert the CD provided into the computer's CD drive, and select [Install DirectX] from easy setup. Then follow subsequent onscreen messages to install DirectX.

## The remote control doesn't work

### Cause (1):

There are no batteries inside the remote control

### Solution (1):

Set batteries inside the remote control

### Cause (2):

The batteries are exhausted

### Solution (2):

Replace the old batteries with new ones

### Cause (3):

The batteries are not inserted correctly

### Solution (3):

Check the polarity of the batteries (+, -) and insert them correctly

### Cause (4):

The remote control is being pointed at the television

### Solution (4):

Point the remote control at LinkTheater to operate it.

### Cause (5):

There is an obstruction between the remote control and LinkTheater

### Solution (5):

Either move or avoid the obstruction.

### Cause (6):

The remote control is too far away from LinkTheater

### Solution (6):

Move the remote control closer to LinkTheater to operate it.

## Cannot recognize the files inside a registered folder

### Cause (1):

The file names are written in 2 byte code characters

### Solution (1):

Files that have names written in 2 byte code characters may not be displayed correctly. Change the file names if they are not displayed correctly.

## The startup screen is not displayed, and the computer is not recognized by LinkTheater

### Cause (1):

The LAN cable is not connected

### Solution (1):

Check that the LAN cable is connected to both the computer and LinkTheater (push in the LAN cable until you hear a “click”). After connecting the LAN, switch the LinkTheater power off and on again.

### Cause (2):

The wrong cable is being used (when connecting directly to a computer)

### Solution (2):

You need to use a crossover cable when connecting LinkTheater directly to a computer. Connect with a crossover cable. After connecting the cable to the LinkTheater and to your LAN, switch the LinkTheater's power off and then on again.

### Cause (3):

The software that came with LinkTheater has not been installed

### Solution (3):

Insert the CD provided into the computer's CD drive, and click [Install PC-P1LAN Utility] from easy setup.

### Cause (4):

The BootServer is not running on your PC

### Solution (4):

Check that the BootServer icon  is displayed in the task tray. If the icon is not displayed, click [Start]-[All Programs]-[BUFFALO]-[PC-P1LAN]-[PC-P1LAN BootServer].

### Cause (5):

There is a problem with the router or access point

### Solution (5):

If you have tried all of the above solutions but LinkTheater is still not recognized on the environment connected to your router or access point, refer to [Read Me First] and connect LinkTheater directly to the computer.

### Cause (6):

The IP address is wrong

### Solution (6):

Refer to “For customers that do not have a router” (page 12) and check that the computer IP address and LinkTheater IP address have the first three groups of numbers the same, and the last group of numbers different. For example, if the LinkTheater IP address is [192.168.11.51], check that the computer's IP address is [192.168.11.61] or something similar. Subnet masks should be the same for both.

### Cause (7):

Software that contains a firewall is installed

### Solution (7):

If a firewall is enabled, the computer may not be recognised from LinkTheater. In this case, you can disable the firewall function or accept use of UDP ports [59821] [59823] and TCP ports [8888] [9666] [9667] [58080] [58001] [59824], or uninstall the software that has firewall settings. Contact the software maker for information about firewall settings. The following is an example of how to disable a firewall.

#### [When Trend Micro PC-Cillin 2003 is installed]

Use the following procedure to disable the [Personal firewall function].

1. Select [Start] - [(All) Programs] - [Trend Micro PC-Cillin-2003] - [PC-Cillin-2003 operations].
2. When the [PC-Cillin-2003 operation screen] starts, click on the [Professional] tab.
3. Click the [Emergency lock] button displayed on the right side, check that [Emergency lock is OFF] is displayed, and click [OK].
4. Check that there is an x mark in the [Wireless LAN mode] button. If there is no x mark, click the [Wireless LAN mode] button to switch the wireless LAN mode OFF. When these settings are completed, close the [PC-Cillin 2003 operation window].

5. Select [Start] - [(All) Programs] - [Trend Micro PC-Cillin-2003] - [PC-Cillin-2003 settings].  
If [Use LAN proxy server] is unchecked, the settings are complete.  
If it is checked, click [Detailed settings] and proceed to procedure 6.
6. When the [PC-Cillin 2003 operation screen] starts, remove the [Enable personal firewall] in [Personal firewall] - [Security level], and click [Apply].

#### **[When Trend Micro PC-Cillin 2002 is installed]**

You can either use LinkTheater with the [Personal firewall function] disabled, or you can register LinkTheater as a [Trusted computer] using manual settings. See below for more details.

##### **● Procedure for disableing the personal firewall function**

1. Select [Start] - [(All) Programs] - [Trend Micro PC-Cillin-2002] - [PC-Cillin-2002 settings].  
\* If PC-Cillin is permenantly running, right click the PC-Cillin icon in the task tray, and select [Open settings screen].
2. Uncheck [Personal firewall] from quick settings in the PC-Cillin 2002 operating screen, and click [Apply].

This completes the settings.

##### **● Procedure for registering the Link Station IP address**

1. Select [Start] - [(All) Programs] - [Trend Micro PC-Cillin-2002] - [PC-Cillin-2002 settings].  
\* If PC-Cillin is permenantly running, right click the PC-Cillin icon in the task tray, and select [Open settings screen].
2. Select [Personal Firewall] - [Trusted computers] from the menu on the left side of the PC-Cillin 2002 settings screen.
3. The network adapter is displayed in the [Trusted computers] column. Check it and click [Apply].

#### **I cannot playback videos, music, or pictures**

##### **Cause (1)**

The file is not suitable for playback on LinkTheater

##### **Solution (1)**

Not all computer files can be played by LinkTheater. Play only the filetypes listed on page 2.

##### **Cause (2):**

File is damaged

##### **Solution (2):**

Damaged files cannot be played back.

##### **Cause (3):**

JPEG files other than baseline JPEG files are being displayed

##### **Solution (3):**

LinkTheater can only display baseline JPEG files. Use normal baseline JPEG files.

##### **Cause (4)**

The saved folder heirarchy is too deep

##### **Solution (4)**

For image files, only files in the first two levels can be played back. Move the files into second level or higher folders.

##### **Cause (5)**

Image and audio are not interleaved

##### **Solution (5)**

AVI files that are not interleaved cannot be played back. When creating AVI files, create them with the interleave setting.

##### **Cause (6)**

Files that have been encoded in DivX 5 format with [Use Quarter Pixel] or [USE GMC] options enabled are being played back

##### **Solution (6):**

Files that have been encoded in DivX 5 format with [Use Quarter Pixel] or [USE GMC] options enabled cannot be played back. Disable these options when encoding the files.

**Cause (7):**

Files are copy protected

**Solution (7):**

DRM and copy protected files cannot be played back on the LinkTheater. Play only files that do not have DRM or copy protection.

**Videos are not displayed correctly****Cause (1):**

Videos are recorded in a television format other than NTSC

**Solution (1):**

LinkTheater plays NTSC video. Record all videos in NTSC format for playback on the LinkTheater.

**Cause (2):**

LinkTheater is connected to your television through a VCR

**Solution (2):**

LinkTheater is equipped with copy protection, so playing back videos through a VCR may cause the video to roll or become distorted. Connect LinkTheater directly to an input on your TV.

**Sound skips/frames dropping occur during playback****Cause (1):**

Traffic on the network is not leaving enough bandwidth for the LinkTheater to operate

**Solution (1):**

If another device is communicating on the network while LinkTheater is playing back, the network may become congested and skipping or dropped frames may occur. If skipping or dropped frames occur, finish other network tasks, then play your video files.

**Cause (2):**

LinkTheater is connected to an 11Mbps wireless network

**Solution (2):**

If LinkTheater is connected to an 11Mbps wireless network, playing back files above 3Mbps may lead to skipping or dropped frames.

**Cause (3):**

The type of file, definition, or encoding conditions for playback are not suited to LinkTheater

**Solution (3):**

skipping or dropped frames may occur with some files. Play files that are supported by LinkTheater (page 2).

**Cause (4):**

The bitrate exceeds 8Mbps

**Solution (4):**

Using the procedure on page 3 to convert video files to MPEG-2 format with a bitrate less than 8Mbps.

**When watching on a television, the edges (perimiter) of the video are cut and the video appears distorted**

Generally, televisions display with overscan, which cuts a small amount of the video signal periphery when displaying the video on the screen. The amount of periphery cut differs depending on the television, so the edges (perimeter section) of the video may appear ragged, or the video may appear either vertically or horizontally distorted. Adjust this in your TV's image settings.

**Provided software is being blocked, and LinkTheater cannot recognize the computer (Windows XP)**

After installing the provided software, the [Continue to block this software?] message may be displayed after restarting the computer.

**If this occurs, click [Remove block].**

**If you clicked [Check later]**

Restart the provided software. [Continue to block this program?] is displayed again. Click [Remove block].

### **If you clicked [Block]**

Use the following procedures to change the firewall settings.

- 1.** Click [Start]-[Control Panel].
- 2.** Click [Network and Internet connections]-[Change Windows firewall settings] (or double click [Windows firewall]).
- 3.** Click the [Exception] tab.
- 4.** Click the [BUFFALO MediaServer] check box to display a check mark. Click [OK].

### **Technical Support**

---

North America Support is available 24 hours a day, 7 days a week:

Telephone: 866-752-6210

Email: [info@buffalotech.com](mailto:info@buffalotech.com)

Europe Support is available between 9am-6pm (GMT) Monday-Thursday and 9am-4:30pm on Fridays:

Email: [helpdesk@buffalo-technology.ie](mailto:helpdesk@buffalo-technology.ie)

# Glossary

## • AVI

Digital file format developed for Windows by Microsoft. If a video is recorded in AVI format (without using codec), the recorded file size becomes larger because video compression is not used (if recorded at 320 x 240 resolution, 30 minutes of video requires about 5GB of space). Advantages are that files can be processed simply using editing software, but video and audio timing may become out of sync if recorded for a long period of time.

## • CBR: Constant Bit Rate (Constant bitrate)

Videos are usually recorded at the same bitrate (amount of data). For this reason, there may be reduced image quality if you compare scenes that have a lot of movement with those that have little movement. Furthermore, block noise may also occur in scenes that contain intense movement because of the lack of bitrate.

## • CQ: Constant Quality (Constant quality)

The bitrate is changed automatically to keep image quality constant. As the bitrate changes according to the video, the size of the recorded files will differ greatly depending on the video being recorded (videos with lots of movement are larger).

## • CVBR: Constrain Variable Bit Rate (Variable bitrate)

This mode records within a bitrate range (data size) set prior to recording. Recording is performed with a higher bitrate when there is a lot of movement, and a lower bitrate when there is only a little movement. On LinkTheater, you can specify the (average) bitrate and maximum bitrate, and record using the (average) bitrate value as the average value.

## • MPEG

International standard of animation compression defined by the Moving Picture Expert Group (commonly known as MPEG format forum). MPEG format adopts a method that compresses the video and audio data separately, and is the format used on DVD-Video and Video-CD. There are a number of formats within MPEG format, such as [MPEG-1] or [MPEG-2].

## • MPEG-2

Like MPEG-1, but much better. This is the format used for DVD-Video.

## • WMV

WMV is Microsoft's Windows Media Video format.

## • Codec

Codec is the collective name for coding and decoding. A codec is a program that compresses/decompresses video and audio, and is required for playing/saving video on a computer. There are many types of codecs, and different codecs are required for different video files. If there are no codecs that suit a particular file on the computer, the video may not be displayed, or the audio may not be outputted.

## • Bitrate

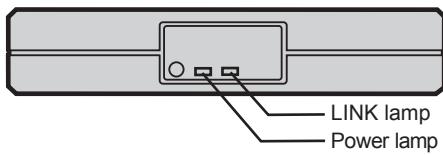

Rate of data flow for a video file. Higher bitrates give better quality video, but increase network traffic and file size.

# Specifications

 Note For the most up-to-date product information or model compatibility, please refer to the catalog or [www.buffalotech.com](http://www.buffalotech.com).

Wired LAN interface	
Compatible standards	Conforms to IEEE802.3/IEEE802.3u (10BASE-T/100-BASE-TX)
Transfer rate	10/100Mbps (Auto sensing)
Connector type	RJ-45 8 pin connector
External output	
format	NTSC (Japan domestic specifications)
Composite video	RCA Pin jack x 1 (yellow)
Analog audio	RCA pin jack x 2 (left: white right: red)
BUFFALO MediaServer	
compatible computer	DOS/V computer with Ethernet board (OADG specifications), and NEC PC98-NX series
Supported OS	Windows XP, Windows 2000 SP4 or later * If you are using Windows 2000 SP4, update your computer to the newest version from Windows Update. LinkTheater may not operate correctly unless Windows 2000 is up to date with the newest version.
CPU	Pentium3 800MHz or above, or equivalent performance CPU * To playback files other than MPEG-2 and MP3, you need the operating environment described on Page 2.
Memory	256MB or higher * To playback files other than MPEG-2 and MP3, you need the operating environment described on Page 2.
Hard disk	50MB or more free disk space * To playback files other than MPEG-2 and MP3, you need 4GB or more of free disk space.
Network	Ethernet port (100BASE-TX/10BASE-T)
Others	
Power source	AC100V 50/60Hz
Power consumption	Average 5W max 6W
Operating environment	Temperature 32~104° F, humidity 10~50% (without condensation)
Dimensions	8.7" (W) x 1.8" (H) x 4.9" (D) including rubber legs
Weight	1.3 lbs.
Supported LinkStation	BUFFALO HS-DGL series * Video and audio files other than MPEG-2 and MP3 files cannot be played back.

## Display lamp specifications

Power lamp	
Lit green	When power is ON
Lit orange color	When in standby mode
LINK lamp	
Lit green	Lights when the LAN link is up, goes out when the LAN link is down
Flashing red twice	System malfunction. Contact the BUFFALO support center.
Flashing red three times	Wired LAN malfunction. Reconnect the LAN cable.
Flashing red five times	Server malfunction. Check the following items. <ul style="list-style-type: none"><li>• Is the startup server running on the computer?</li><li>• Check that the ulimage file and initrd.boot file are in the [ProgramFiles]-[BUFFALO]-[PC-P1LAN]-[BootServer]-[firm] folder on the computer startup hard disk. If the files are missing, copy them from the CD provided [PC-P1LAN_firm]-[firm] folder.</li></ul>
